AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the application:

Listing of claims:

1-35. (canceled)

- 36. (previously presented) A method for preparing an electrically conductive polymeric material comprising:
 - a) providing a vinyl benzyl halide grafted film substrate;
- b) reacting the vinyl benzyl halide grafted film with an equimolar mixture of 4,4' bipyridine and p-xylene dihalide to form a viologen salt-grafted film;
- c) coating the viologen salt-grafted film with polyaniline to form a polyaniline-coated film; and
- d) exposing the polyaniline-coated film to near-ultraviolet radiation to obtain an electrically conductive polymer.

37-38. (canceled)

- **39.** (currently amended) A method for preparing an electrically conductive polymeric material comprising:
- a) contacting a polymeric material with [[a]] at least one viologen salt to form a pre-doped composition, wherein said polymeric material is capable of exhibiting electrical conductivity

upon oxidative doping, by forming the viologen salt in situ on a substrate to obtain a viologen-salt coated substrate and then forming the polymeric material in situ on the viologen-salt coated substrate; and

b) irradiating the pre-doped composition with electromagnetic radiation, thus producing an electrically conductive polymeric material.

40. (canceled)

- **41.** (**new**) The method according to claim 39, wherein the electromagnetic radiation is of one or more UV or near UV wavelengths.
- 42. (new) The method according to claim 39, wherein a mixture of viologen salts is formed upon the substrate.
- 43. (new) The method according to claim 39 wherein at least one of the 1,1'-substituents of the viologen salt are independently selected from an alkyl group or a benzyl group.
- 44. (new) The method according to claim 39 wherein the at least one viologen salt formed is a polymeric viologen salt.

- 45. (new) The method according to claim 44, wherein the viologen salt moiety is present in the backbone of the polymeric viologen salt.
- 46. (new) The method according to claim 44, wherein the viologen salt moiety is present as a side chain of the polymeric viologen salt.
- 47. (new) The method according to claim 39, wherein the viologen salt is a viologen dihalide.
- 48. (new) The method according to claim 44, wherein the viologen salt is a viologen dihalide.
- 49. (new) The method according to claim 39 wherein the polymeric material is polyaniline, a polyaniline derivative, polypyrrole, a polypyrrole derivative or a mixture of at least two compounds selected from the group consisting of a polyaniline, a polyaniline derivative, a polypyrrole and a polypyrrole derivative.
- 50. (new) The method according to claim 39, wherein the irradiation step is conducted at a temperature of 0°C to approximately 80°C in the presence of air and in the absence of any solvent.

- 51. (new) The method according to claim 39, wherein the viologen-salt bearing substrate is made by a method comprising:
- i) providing a vinyl alkyl halide grafted low density polyethylene film substrate;

an alkyl halide; and

- 4,4'-bipyridine;
- ii) contacting the grafted film substrate with the 4,4'-bipyridine for a time sufficient to permit reaction therebetween forming a modified grafted film substrate;
- iii) subsequently contacting the modified grafted film substrate with the alkyl halide for a time sufficient to permit the formation of a viologen-salt grafted film.
- **52.** (new) A method for preparing an electrically conductive polymeric material comprising:
- a) contacting a polymeric material with at least one viologen salt to form a pre-doped composition, wherein said polymeric material is capable of exhibiting electrical conductivity upon oxidative doping, by forming the polymeric material in situ on a substrate to obtain a polymer coated substrate and then forming the viologen salt in situ on the polymer coated substrate; and

b) irradiating the pre-doped composition with electromagnetic radiation, thus producing an electrically conductive polymeric material;

wherein both of the polymer and viologen salt are formed in situ by a method comprising:

- i) providing a low density polyethylene film substrate; a solution of aniline or pyrrole; ammonium persulfate; a vinyl alkyl halide or vinyl benzyl halide; an alkyl halide; and 4,4'-bipyridine;
- ii) immersing the polyethylene film substrate into the solution of aniline or pyrrole and ammonium persulfate for a period sufficient to form a polymeric coating on the substrate;
- iii) contacting the coated substrate with the vinyl alkyl
 halide or vinyl benzyl halide;
- iv) subjecting the mixture to UV or near UV irradiation for a time sufficient to form a vinyl alkyl halide or vinyl benzyl halide grafted substrate; and
- v) forming the viologen salt on the vinyl alkyl halide or vinyl benzyl halide grafted substrate via reaction with 4,4' bipyridine and an alkyl halide.
